

Handy hints for using UrineFREE

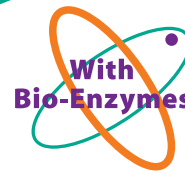

- ★ Do not use other cleaning or odour-masking products. These coat the urine, making it more difficult to remove.
- ★ Check for colourfastness on a small area before treating new surfaces.
- ★ Shake well before use and do not dilute product.
- ★ Ensure padding and sub-surfaces are soaked with UrineFREE where affected.
- ★ Different surfaces may require more or less product depending on porousness or absorbency rate.
- ★ UrineFREE is effective on most soft surfaces around the home as well as hard surfaces including timber, ceramic, marble and concrete.
- ★ Repeat applications may be necessary, especially on older stains. Occasionally, a stain may intensify during the treating process. This indicates urine rising to the surface. It will disappear with repeat treatments.
- ★ Allow the area to stay wet with UrineFREE as long as possible. Plastic wrap may assist where high evaporation is occurring, for example where hot sun is shining through a window onto an affected area.

Directions for using UrineFREE

- 1 Blot up as much fresh urine as possible with absorbent towels.
- 2 Adjust nozzle to spray or stream with UrineFREE to saturate area.
- 3 Let UrineFREE dry naturally. Do not rub.
- 4 When dry, rewet the area with a cloth dampened with water.
- 5 Blot excess moisture with absorbent towels to remove residue.
- 6 Allow to dry.

**UrineFREE, the only urine
remover you'll ever need!**

UrineFREE. How does UrineFREE work?

The safe, effective solution to all urine odours and stains.

Urine comprises three major difficult-to-remove chemical compounds. Conventional chemicals and cleaning fluids merely cover up offending odours, without removing their source. Alcohol or solvent-based products remove some of the compounds but do not remove the insoluble urine salt crystals. These crystals are the source of odours which return in humid conditions, even after 'cleaning'.

UrineFREE does the opposite. Its strong bio-enzymatic action works on the biological composition of urine – even old stains and odours – and actually 'eats' up urine deposits, completely removing both the stain AND the odour.

UrineFREE is the versatile solution to urine stains and odours. It will remove stains on almost any hard or soft surface including fabrics, upholstery, carpets, timber, concrete, ceramic floors and furniture. It is safe when used according to directions and is effective on all kinds of urine, including human.

Guaranteed to work on all urine stains or your money back.

You only need one product!

 **ONE** product for *all household and pet* urine!

 The safe, effective solution to urine odours and stains.

 Effective on carpets, hardwood, concrete, tiles, fabric & more.

UrineFREE. The All-In-One Stain Remover – works on all urine stains and odour.

UrineFREE 500ml

UrineFREE packaged in an easy-to-use 500ml bottle with combination trigger sprayer: use the spray setting for hard surfaces or the stream setting for carpet and upholstered surfaces.

for the larger jobs

UrineFREE 2 Litre

Contains the equivalent of four spray bottles of UrineFREE. Don't throw away your 500ml bottles. You can refill them with our 2 litre container refills saving money and reducing waste.

UrineFREE 5 Litre

Containing the equivalent of 10 spray bottles of UrineFREE, the 5 litre is more economical and perfect for larger problem areas. Can be applied using a pump spray.

UrineFREE 10 Litre

Containing the equivalent of 20 spray bottles of UrineFREE, the 10 litre is more economical and perfect for larger problem areas.

UrineFREE Urine Detector

Powerful LED ultraviolet technology finds urine you can't see.

The sources of urine odours and stains are often difficult to locate. The UrineFREE urine detector provides a simple, effective way to locate hard-to-find stains. Dry urine's crystalline structure shows up under the powerful LED provided by the detector. Do not shine in eyes as rays may be harmful.

1. Start with the bathroom to see what urine stain looks like under LED.
2. Darken bathroom as much as possible.
3. Check first around the base of the toilet bowl. Even if apparently clean, stains will always appear because normal cleaners do not remove crystals.
4. Now you're familiar with the stain, make your inspection of other areas of the house you suspect may be affected by odour or stains.

Easily locates...
those hard to find Urine deposits!
